

# Caring for your hard bite raising appliance (Michigan splint)

**This leaflet explains how to look after your hard bite raising appliance.**

## Key points

- You have been given this appliance to help relieve jaw joint and associated muscle pain. It has been made to fit accurately.
- Your appliance is made of a hard acrylic (methyl Methacrylate).
- Make sure you fit your appliance correctly, ensuring it clicks over your teeth.
- Your appliance is usually worn overnight unless the doctor tells you otherwise.
- Clean your appliance using running water, your toothbrush and toothpaste. It is advisable to run some water into the sink to prevent damaging the appliance if it is dropped whilst cleaning.
- Keep your appliance on the model or in a container when not in use, in order to keep it safe.
- You will need to wear your appliance regularly for it to be effective. If it is not worn regularly it may not fit as your teeth may move slightly.
- If the appliance is damaged please contact the department as soon as you can so that we can arrange to repair it. There may be a charge to repair or replace the appliance.
