

Swallowing exercises:

Masako (base of tongue strengthening)

This leaflet is for patients who are experiencing swallowing difficulties and have been advised to complete the Masako swallowing exercise for rehabilitation. This exercise should only be used by the individual named below and under guidance from your speech and language therapist.

Patient name: _____

Why do I need to do this exercise?

Dysphagia can make it difficult to eat, drink and take your medication and you may be at risk of food, fluids or saliva 'going down the wrong way'. If this happens, it can result in choking and/or chest infections known as 'aspiration pneumonia'. The below exercise has may help to improve your swallowing.

The exercise

To control the food and fluid during your swallow, the back of your tongue contacts the back of your throat and squeezes food and drink down into your oesophagus (food pipe). This swallow technique is designed to strengthen the base of your tongue and improve this action. You should feel effort when doing this exercise, but **STOP** if you experience any pain. Please raise any concerns you have with your speech and language therapist or doctor.

Please complete ___ times per day for ___ weeks.

How to complete 'Masako' exercise:

- A) Protrude your tongue and hold it between your teeth. If you are unable to do this, push your tongue onto the back of your teeth.
- B) Swallow hard whilst keeping your tongue between your teeth.

HINT: If it is recommended by your speech and language therapist, you may wish to sip or moisten your mouth with water between each repetition to keep your mouth moist.
