

100Kcal boosters – heart healthy

A Food First Approach

If you are struggling with a poor appetite or have lost weight recently then this leaflet could help you.

If you have been seen by the speech and language therapist and diagnosed with **DYSPHAGIA** (problems with swallowing) please do not use this leaflet.

Eat little and often

Try to have 3 meals each day plus 3 snacks and nourishing drinks between meals. If you cannot eat a full meal, eat a small amount every 2-3 hours. Try these booster ideas:

- Eat what you fancy and if your appetite is better at certain times of the day, aim to eat more at these times. Cold foods can sometimes be more appetizing than hot foods.
- Use convenience foods; ready meals and puddings can be easier to prepare and are just as nutritious.
- If you add extra sauces or gravy to your meals they may be easier to eat.
- Choose foods and drinks that are 'nourishing' i.e. high in calories and protein such as low fat yoghurt, protein yoghurt, protein drinks such as Huel and UFIT.
- Drinking during meals may make you feel full so try and wait until after you have finished eating to have a drink.
- Aim for a high fibre diet by choosing wholegrains and aiming for 5 fruits and vegetables each day, this helps bind to the cholesterol and reduce the levels in your blood.
- Include plant sterol yoghurt drink one per day, e.g. Benecol or supermarket own label.
- Try to stay active

The following examples are approximately 100 calories each:

(These boosters can be added to recipes and meals)

- | | |
|----------------------------------------|----------------------------------------|
